Abstract (en)
[origin: WO2008077539A1] In order to produce an electroluminescent lamp, starting with an electrically conductive carrier (1), an insulating layer (2) is formed on the carrier (1). A luminescent layer (3) formed on the insulating layer (2) is able to radiate light when an electric field is applied. An electrically conductive layer (4) is formed on the luminescent layer (3).
