Abstract (en)
The invention relates to a ball lock, for use in, for instance, shoplifting detection tags, wherein the uncoupling function is spatially separated from the clamping device. As a result, a longer pin (10) can be utilized, so that thicker products can be protected and the uncoupling properties can be adjusted per type of uncoupling device. Owing to the construction of the ball lock, it has become very difficult to remove the fastening of the pin through cutting open or burning open with a flame. Through adjustment of the uncoupling part and/or through the coil spring (6) of the ball lock, the force that an uncoupling apparatus is to apply to the lock for uncoupling this can be optimized.
