Abstract (en)

[origin: EP2120484A2] The method involves generating electric acoustic signals (s1',s2',s3') by a hearing device (1) from the received ambient sound (s1,s2,s3), which are weighted to a predetermined acoustic signal class corresponding to its matching degree and mixed to an output sound signal (s). The weight (g1,g2,g3) of the acoustic signal is larger or smaller, as the matching degree is high. Independent claims are included for the following: (1) a computer program product with a computer program for performing the hearing device operating method; and (2) a hearing device, which comprises microphone for receiving ambient sound.
