Abstract (en)
[origin: WO2008101597A1] The invention relates to a method for implementing a drying program section in washing equipment, in particular in a domestic dishwasher (1), with a washing container (2), which can be closed on its front side by a door (3) mounted pivotably in the lower region, with an apparatus (19, 20) for automatically opening the door (3) to form a gap and with a condensation drying device, which contains means (13) for generating a cooling air flow (15). In order to improve the method such that the formation of condensation on the lower side of a worktop is reliably avoided, some (21) of the cooling air flow (15) is guided along part (12) of the lower side of a worktop (11), which covers the washing equipment casing (8) at the top, before and after the door (3) is opened to form a gap.
