Abstract (en)

[origin: FR2909551A1] The apparatus (1) has a vibrating head (3) applied with respect to transverse process (101) of vertebra (100) and another vibrating head (3) simultaneously applied with respect to another transverse process (101) of the vertebra. An MEIRI(RTM: UV-2HF-SW2 inclinometer) is arranged along a direction parallel to direction moving from one head to another head, and detects level difference between vibration application zones (28) of the heads. An operating unit with a transparent push button (5) operates the heads one with respect to other according to the difference between the zones.
