Abstract (en)

[origin: WO2008066477A1] Driver (1) for a propeller shaft, comprising a substantially tubular fastening portion (3) adapted to being fastened to a propeller shaft tube or a splined sleeve, and two mutually opposite lug portions (6), each provided with a hole, which protrude from the fastening portion in order to support a joint cross. The driver according to the invention is distinguished particularly by being made from a substantially tubular blank, the two lug portions (6) being formed by recessing and holing in the wall of the blank, and the seats for the joint cross taking the form of a reinforcing bushing (13) in the hole of each lug portion. The invention also relates to a method for making drivers and a device for making drivers.
