Abstract (en)

[origin: DE102006057090A1] The device has a printing head comprising jets or has an ink outlet opening coupled to the inkjet of an ink jet head. The jets of the printing head remain in fluid connection with an ink storage element, which has absorbent material or a vacuum producing mechanism. The ink storage element is arranged in the ink cartridge, either directly or by a wick in the ink outlet opening coupled to the inkjet of an ink jet head. A container filled with ink has an opening, in which a wick (20) dipped in ink is located, and is brought in contact with the ink storage element of the ink cartridge.
