Abstract (en)
[origin: WO2008115103A1] The present invention relates to a backrest support mechanism (1) for a motor vehicle seat, comprising a support plate (5), attached to either of a seat squab (3) and a seat backrest (4), a first connection (7) between the support plate (5) and either of the squab (3) and the seat backrest (4), a second connection (8) between the support plate (5) and either of the squab (3) and the seat backrest (4). The support plate (5) is adapted to deform plastically to permit movement of the seat backrest (4) rearwardly relative to the seat squab (3) when subjected to a predetermined force. The present invention aims at providing a space efficient backrest support mechanism not being bulky and complex, which is easy to mount in a seat.
