Abstract (en)  
[origin: WO2008115103A1] The present invention relates to a backrest support mechanism (1) for a motor vehicle seat, comprising a support plate (5) , attached to either of a seat squab (3) and a seat backrest (4) , a first connection (7) between the support plate (5) and either of the squab (3) and the seat backrest (4), a second connection (8) between the support plate (5) and either of the squab (3) and the seat backrest (4) . The support plate (5) is adapted to deform plastically to permit movement of the seat backrest (4) rearwardly relative to the seat squab (3) when subjected to a predetermined force. The present invention aims at providing a space efficient backrest support mechanism not being bulky and complex, which is easy to mount in a seat.
