Abstract (en)
[origin: FR2913006A1] The package has a case (200) e.g. carton, with a cover (202) parallel to a bottom of the case when the case is closed. A support (300) supports an ophthalmic lens (100) by an outer edge of the lens. The support has a flexible finger (305) situated close to the edge of the lens carried by the support. The finger extends in the direction of cover when the case contains the support with the lens, with a length of the finger adapted for which the cover bends the finger by pressure. The curved finger is supported against the edge to maintain the lens at a distance from the cover at inside the case.
