Abstract (en)

[origin: CA2674706A1] Disclosed is a method for continuously producing switch ties which differ from one another with respect to the length thereof and the mounting position of rail fastenings. Said method comprises the following steps: - one or more supporting metal sheets and/or one or more internal molds are mounted in a tie mold (1) according to the length and the shape of the switch tie to be produced, or at least one tie mold is used which is adapted to the geometry of the switch tie to be produced; - bracing bars (5) are inserted as reinforcement; - the bracing bars are simultaneously tightened in an automatic manner by means of pairs of spindles, each bracing bar being individually tightened; - concrete is filled into the tie mold (4); - the switch tie (11) is allowed to set; - the switch tie is removed from the mold.
