Abstract (en)
[origin: WO2008098383A1] The invention relates to a ground-working machine (11) equipped with a drive and with transporting means (21). Its transporting means (21) serve inter alia to carry a supporting structure (23) at a distance from the positioning plane of the machine, on which supporting structure (23) is arranged, in the region of a central axis (Z), a cutting tool (25) with at least one transverse cutting roller (13) for working the ground on which the ground-working machine is standing. The cutting roller (13) can be rotated about its roller axis (V). This roller axis (V) can be pivoted about a steering axis (W), which steering axis (W) is arranged in the direction of the central axis (Z) at a distance from the transporting means (21).
