Abstract (en)
[origin: WO2008089859A1] The invention relates to a fitting (1) on a leaf, or on a fixed frame, of a door, having a face plate rail (2) disposed on the leaf, or on the fixed frame, and a drive rod (3) that can be displaced in the longitudinal direction thereto, the rod having a locking element (12) of a locking device of the window or the door, wherein the locking element (12) can be displaced in a locking position and opening position by means of the drive rod (3), wherein a U-shaped holding element (15) is provided on the bottom (14) of the face plate rail (2) at a distance to the locking element (12), the element being connected to the face plate rail (2) and disposed along the displacement path of the locking element (12), and the holding element encompassing the drive rod (3) configured in a U shape on outer lateral edges (16) of the drive rod (3) extending perpendicular to the face plate rail (2).
