Abstract (en)

[origin: US2008149698A1] A device for the intake and output of paper currencies comprises an arrangement for examining the value and authenticity of the currency, which thereafter is fed to a transport system of a currency stacking bank via a currency storage module, wherein the storage module, which is exchangeable located below the currency stacking bank is constructed as a revolving magazine and comprises a series of roller magazines, whereby the intake and output opening of each of the roller magazines is pivoted by means of an actuator into a d position of the transport system.
