Abstract (en)

[origin: EP2123813A1] The arrangement has a rod for connecting heald shafts with a drive machine that has a shaft lever (10a-10c) for each heald frame. The rod has switching levers (18a-18c) with arms (25a-25c), which together define angles (alpha, beta). Angle sums of the levers of the different heald shafts differ from each other. An angle of the lever (18a) of one heald shaft lying adjacent to a web bonding point is smaller than an angle of the levers (18b, 18c) of the other heald shafts that are arranged at a distance from the point.
