Abstract (en)

[origin: EP1932461A1] Guiding device (13) comprises a hollow body for guiding the air stream from the intake (12) of the body to an outlet opening of the body. The body is connected to a vacuum cleaner filter bag so that an air stream from the outlet opening passes through the intake into the bag. The intake is arranged in a first plane and the outlet opening is arranged in a second plane so that the planes are inclined against each other by a predetermined angle. An independent claim is also included for a vacuum filter bag comprising a filter material and a guiding device. Preferred Features: The inner wall and/or the outer wall of the hollow body is arranged perpendicular to the first or second plane in a linear or curved manner. The hollow body is rigid or flexible.
