Abstract (en)
[origin: DE102007009723A1] Roller grinding mill comprises a pressure system formed by a hydropneumatic spring system (8), and a rocking arm (6) mounted a distance away from the mill housing so that forces created by the pressure system can be fed directly or via towers into the mill base. Preferred Features: The hydropneumatic spring system has at least one traction cylinder with a storage system and acts on the rocking arm below the mill roller axis.
