Abstract (en)

[origin: FR2912332A1] The machine i.e. tapering machine (200), has a base supporting plate (240) placed and enclosed with another base supporting plate (220) and a tool supporting plate (230). The plate (240) supports bases (241) distributed on its circumference, and is animated from a discontinued rotational movement around an axis (201) of a column (215) turning step by step. The tool supporting plate has housings provided on its oriented surface towards the plate (240), where the housings fix a matrix (232) or a tool used to deform a transversal wall of a blank with respect to the bases of the plate (240).
