Abstract (en)

[origin: CA2678516A1] The invention relates to a furniture component (1) comprising a core (2), which is covered by a film (6) at least in the region of a narrow face (5; 11) and side surfaces (3, 4) of the core adjoining the same, and to a method for the production thereof. The aim of the invention is to enable the simple production of a smooth, stable and tight surface of the face of a furniture component covered with the film. This aim is achieved by a furniture component, wherein a smoothing layer (8; 12) for smoothing the surface of the face is provided between the face and the film, and by a method, wherein a smoothing material (8'; 12a, 12b, 12c) is applied to the face in order to form a smoothing layer, the film (6; 6', 6'') is then applied to the face, and subsequently the film is applied to at least one first lateral surface adjoining the face and glued thereto.
