Abstract (en)

[origin: WO2008089951A1] The invention relates to an airflow heating device for a heating or air conditioning system of a vehicle, comprising a heating element (10), which is arranged in an airflow region and comprises an electrically conductive nonwoven fabric (11). The invention further relates to an auxiliary heating device and a vehicle heating or air conditioning system, which comprises the airflow heating device. Compared to the conventional solutions, using an electrically conductive nonwoven fabric saves weight.
