Abstract (en)
[origin: WO2008101527A1] In a labeling device for containers (2) comprising at least one transport element (9, 15) for transporting, conveying, and applying labels (3), wherein the transport element has at least one contact element with at least one contact surface, on which at least one label is affixed in an adhesive manner during the intended operation in order to transfer the same onto the container surface, the contact surface is a surface having increased adhesion, which is to say the label is held affixed to the same by means of increased van der Waal adhesion forces between the label and the contact surface.
