Abstract (en)

[origin: WO2008110897A1] The invention relates to a steam iron that comprises a housing including a tank (5) above a heating body and a safety device that protects the tank (5) against overpressure, the heating body (3) comprising a vaporisation chamber supplied with liquid from the tank (5) by a supply circuit, characterised in that said supply circuit includes a member (93) extending inside the tank (5) and having an opening (12) blocked by a valve (94A), said valve (94A) opening a passage through said opening (12) when the pressure inside the tank (5) reaches a predetermined value.
