Abstract (en)

[origin: WO2008090259A1] The invention relates to a system in a web forming machine for guiding a web (28) in connection with a grooved roll (12). The grooved roll (12) includes a surface structure (16) with grooves (56) said grooves (56) being open only to the outer surface of the grooved roll (12). A runnability component (18) is included in connection with the grooved roll (12). In addition, the runnability component (18) includes at least one passive zone (22) in the cross direction (20) of the web forming machine.
