Abstract (en)

[origin: WO2009027117A1] The invention relates to a toilet flusher (1) comprising an energy source (3), a control unit (4), a sensor unit (5), and at least one first container (9) that contains a first preparation (10) and may be coupled with the toilet flusher, wherein the sensor unit (5) detects an initiation of the flow of flushing water without engaging in the flow of flush water and generates a signal that is conducted to the control unit (4) that converts the sensor signal into a control signal for dispensing at least one preparation.
