Abstract (en)

[origin: GB2446722A] The invention relates to a structural framing system 1 which may be used to provide a partition wall. The framing system comprises track frame elements 3 and stud frame elements 4, interconnected at joints (2 figure 1). The system comprises connection means for interconnecting the frame elements 3 and 4. The connection means comprises an adaptor 10 for a frame element and fixing means for fixing the adaptor to the frame elements. The adaptor may be channel shaped with a web 11 and side flanges 12. The side flanges of the adaptor 10 engage with the end of the stud frame element 4 such that the flanges 12 of the adaptor engage with the flanges 8 of the stud frame element 4. Rivets 30 may be used to fix the stud frame element 4 to the adaptor 10. Track fixing means may comprise a fixing bolt 25 extending to engage with a receiver 26 which is captive in the web 11 of the adaptor 10.
