Abstract (en)

[origin: WO2008105734A1] The invention relates to a building element formed as a vertically directed column (4) having an upper and a lower end. The column (4) is placed within the climatic barrier of a house body provided with walls and a roof. The column (4) is formed to carry the load (5b, 6, 16b). According to the invention, the column (4) is provided with a longitudinal cavity. In the cavity, at least one duct for heat -carrying media is arranged. Furthermore, at least one duct for communication (7) is arranged in the column (4).
