Abstract (en)
[origin: WO2008125183A1] The invention relates to a light fixture having an outer envelope (1) with a predetermined inner volume in communication with the outside by an opening (12) and in which is provided at least one reflector defining, as seen in the cross section, at least a portion of an ellipse or a parabola symmetrically arranged in the inner volume. The reflector is defined by at least two inner plates (16, 17) directly with the outer envelope during the extrusion of the profile, the two inner walls being separated in the region of the top of the ellipse or parabola for accessing attachment means (24) for receiving one or more lighting members (22, 23; 25, 26, 27).
