Abstract (en)
[origin: WO2008077704A2] A refrigeration device comprises a housing enclosing an interior and an assembly (7) arranged in the interior (3) and having a storage compartment (6) for chunks of ice and a stirrer (9). Said stirrer (9) is rotatable about an axis that extends through the storage compartment (6) to move chunks of ice contained in the storage compartment (6) in relation to each other and towards a dispensing passage that extends through the housing. A closable flap (32) is interposed between the storage compartment (6) and the dispensing passage.
