Abstract (en)  
[origin: WO2008101666A2] The invention relates to a refrigerator and/or freezer comprising a door or flap for closing the interior of the appliance, a hinge which allows the door or flap to be swiveled relative to the carcass of the appliance and is provided with means for generating a closing force acting in the closing direction of the door or flap, and a damper that applies a force counteracting the closing movement of the door or flap at least during part of the closing movement. The means for generating a closing force encompass an eccentric and means that apply a force which acts upon the eccentric and depends on the opening angle of the door or flap.
