Abstract (en)
[origin: WO2008079402A1] As one example, a system for monitoring client Internet activity is provided. The system comprises a channel server including multiple channels, each of which are defined at least in part by an activity profile associated with the channel, and a monitor configured to monitor Internet activity of a plurality of clients and detect when any of the monitored clients satisfy any of the activity profiles associated with the channels, where for a given user, the monitor is configured to monitor interaction of the user in relation to multiple different independent websites to determine if one of the activity profiles is satisfied.
