Abstract (en)

[origin: WO2008104223A1] The invention relates to a circuit arrangement for the dimming control of one or more operating devices (3) for lamps (4), wherein the operating device (3) is controlled during the single pushbutton operation using a pushbutton (T1), which conducts the supply voltage (L) to a control terminal (1) of the operating device (3) via a control line (5), and switching and dimming functions of the operating device (3) can be carried out by means of said pushbutton (T1). As soon as a second pushbutton (T2) is connected to the control line (5) via a diode (D1), the operating device (3) then switches to a dual pushbutton operation, in which the same is then controlled by two pushbuttons (T1, T2).
