Abstract (en)

The present invention relates to a flow guide with integrated valve intended for descaling nozzles. The fundamental object of the flow guide is to uniform the stream line speeds before entering the nozzle, ensuring in this manner a better operation and consequently a better impact pressure. The fluid-dynamics of the flow guide according to the present invention has been optimized and the flow guide is characterized in that it includes a shutter (3a) and a flow straightener (3b) formed by a single element (3).
