Abstract (en)
[origin: EP2127991A1] The locomotive (15) has a distribution unit (18) guiding a cooling agent (12) cooled by a cooling aggregate (16c). The distribution unit is coupled with the cooling aggregate. The distribution unit is extended in to control stands (2a, 2b) and a machine room (3) so that the machine room and the stands are cooled by the distribution unit. The distribution unit has a channel shaped line system (11) that comprises openings (13a, 13c, 13d, 13e) for delivering the cooling agent, where the opening leads in to the machine room. The aggregate comprises an evaporator and a compressor.
