Abstract (en)
A cladding panel of sheet metal including a mainly rectangular cladding surface (1) and on the upper edge of which cladding panel there is a fastening flange (2;14) which includes fastening members (8,13) for fastening the cladding panel to the wall construction and in which the sheet edge is bent so that the end of the sheet is mainly directed downwards and on the lower edge of the cladding panel there is a second fastening flange (3;15) in which the sheet edge is bent so that its end is mainly directed upwards, whereby the cladding panels are fastenable to each other successively by means of the fastening flanges so that the fastening flange on the lower edge of the upper cladding panel and the fastening flange on the upper edge of the lower cladding panel are fitted at least partially within each other.
