Abstract (en)

[origin: EP2128367A1] The assembly has an upper guiding rail (4) and a lower guiding rail (5) for lateral movement of a door casement (1) along a door wall (2). Housing (13) is placed in the wall delimiting the storage volume. The lower guiding rail comprises a main rail (10) for guiding the lateral movement of the casement when the upper guiding rail is in its disengagement position and when a linear rail portion (15) is perpendicular to the main rail and is in communication with the main rail for guiding the casement during its displacement between disengagement and closing positions.
