Abstract (en)  
[origin: EP2128937A2] The adapter has a high frequency (HF)-outputs (9-11) at one of side walls (8) of housing (2), and HF-inputs (13-15) at a rear wall (12) of the housing. The inputs are movable to one of spots (A-D) provided for the inputs. A circuit board is arranged in the housing, where conductor paths are formed on the board. The paths are connected with inner conductors (9a-11a) and outer conductors (9b-11b) of the outputs and are guided to the spots for the inputs. The paths stay in electrical conductive connection with inner conductors (13a-15a) and outer conductors (13b, 14b) of the inputs.
