Abstract (en)
[origin: WO2008116506A1] The invention relates to a container, particularly for pourable products such as detergents, comprising an outer layer (2), said outer layer (2) forming an outer box, comprising at least six walls, a cover element (4) that swings open, wherein the cover element (4) is configured as part of the outer box (2), an inner layer (3), wherein at least two segments (3a, 3b, 3c, 3d, 3e) of the inner layer (3), which can be folded toward each other, are each disposed parallel to at least two walls of the outer layer (2), and the outer layer (2) comprises at least one strip element (5) that can be torn off, by means of which an edge region of the cover layer can be exposed for the purpose of forming a first opening of the container (1), wherein part of the cover element (4), when closed, covers the inner layer (3) at least partially, wherein the strip element (5) that can be torn off comprises a first end (14) and a second end (15), which is configured as a weakening line (9) between the second end (15) and the pivot point (16) of the cover element (4), wherein the weakening line (9) has a course that deviates from the direct, straight connection (17) between the end point (15) of the strip element (5), which can be torn off, and the pivot point (16) of the cover element (4).
