Abstract (en)
[origin: WO2008135660A1] The invention relates to a device (1) for dispensing and dosing a fluid, of the type comprising a body (2) with an ejection nozzle (3), said body (2) including a storage (4) of a fluid in the form of an aerosol, means for conveying the fluid from the storage to the ejection nozzle (5) including a fluid control wheel (5) that can be rotated about the axis thereof by driving means so as to move from a waiting position to a final fluid-dosing position, wherein said device (1) is characterised in that it comprises a means (6) for controlling the rotation speed of said wheel (5) for releasing the fluid for a predetermined duration, said control means (6) comprising a fluidic retarder coupled with the control wheel (5).
