Abstract (en)

[origin: WO2008125780A1] The invention relates to a diaphragm clutch (10) that comprises a lid (12), a pressure plate (16), a diaphragm (14) mounted between the lid (12) and the pressure plate (16), a first rigid annular member (26) provided between the diaphragm (14) and the pressure plate (16) and attached to the lid (12) by struts (28), a means (22) for articulating the diaphragm relative to the lid (12) and a second pre-stressed elastic annular member (24) mounted so as to bear against the first rigid annular member (26) opposite the articulation means (22) relative to the diaphragm (14), the rigid (26) and elastic (24) annular members being arranged coaxially, the struts (28) being attached relative to the rigid annular member (26) substantially along an fixation circle (C), the bearing area of the second elastic annular member (24) onto the first rigid annular member (26) extending substantially along the fixation circle (C) of the struts (28).
