Abstract (en)

[origin: WO2008106909A1] The invention relates, among others, to a method for the display of information (I) of an electrotechnical system (20), wherein the information is displayed on a screen (60) in the form of an information element (IE). The invention provides that the linking of information to additional information (ZI), which is linked to the information according to a predetermined association, is furthermore achieved in that the information element is displayed in a predetermined screen section (BA) of the screen as a central node element (ZK), and that the additional information linked to the information is disposed around the information element in the form of additional information elements (ZE), wherein at least one of the additional information elements can be selected by the user for the purpose of the display of further additional information related to the respective additional information element, and wherein after the selection of the additional information element the same is displayed as the central node element in the predetermined screen section instead of the information element, wherein linked further additional information (WZI) is disposed around the selected additional information element in the form of further additional information elements (WZE) using the selected additional information element according to a predetermined association.
