Abstract (en)

[origin: DE102008026285B3] The device has a screen drum (2) for accommodating defective cylindrical medicament capsules (1) to be sorted, where the screen drum is rotatable around an axis. The screen drum is supported only in a region of an outer area on a roller (2.6). A funnel-shaped borehole (3) is extended radially inwardly, where the borehole is provided with an arbitrarily specified small diameter. The borehole is radially penetrated into a wall of the screen drum. An internal space is freely accessible by a front side and is closed by the screen drum.
