Abstract (en)

A variable size binder comprises an outer enclosure suitable for taking an open configuration and a closed configuration and internally defining a space (S) for receiving material (M) to be filed, and exhibits a bottom wall (3) and at least a first wall (4) having an edge (4a) connected to the bottom wall (3) and suitable for arranging above the bottom wall (3) in the closed configuration of the enclosure. The first wall (4) is extensible for varying its surface extension so as to allow a same alignment between the first wall (4) and the bottom wall (3) irrespective of the amount of material to be filed included within said space (S).
