Abstract (en)

[origin: EP2130773A1] The method involves conveying a cut-out (10) in a folding station (14) under partial erection of the folding rags of the cut-out successively in recess (12) of the folding revolver (11). A folding revolver allocates the cut-out for an outer casing of the cigarette pack made of paper and thin cardboard. The folding involver rotably drives an individual station in periphery of the folding revolver in synchronous manner, around the recess and cut-out. An independent claim is included for a device for manufacturing a cigarette pack, particularly a hinged-lid type.
