Abstract (en)

[origin: EP2131042A2] The pump has guide blades (8) made of sheet metal and arranged concentrically at a pump impeller (3) between a ring channel (6) and the impeller in a pump head (4). Each blade has three journals, where the journal (9) is arranged in an area of an outer edge of the blades that are rotatably supported in the head via the journal (9). The journal (11) is arranged in an area of the guide blades, and projects into grooves or slots (22) of adjusting rings (23). The rings are arranged rotatably in the pump head, and the grooves or slots have radial and tangential components.
