Abstract (en)  
A heat exchanger (1;3) comprises at least one group of tubes (20;40) the one ends of which are connected to a first manifold (21;41) and the other ends of which are connected to a second manifold (22;42). Each such group of tubes forms a separate module (2;4) comprising a row of laterally adjacently arranged tubes (20;40) the ends of which are connected to the first (21;41) and second (22;42) manifolds, respectively, with the separate modules (2;4) being arranged one after the other, and with manifolds (21,22;41,42) of adjacently arranged modules being connected to one another through at least one connecting channel piece (25;45) in a manner so as to form a series arrangement of modules (2;4).
