Abstract (en)  
[origin: EP2131342A1] The clamp (10) has two clamp elements (20, 30) rotated against each other around a rotation axis and including clamp ends. The ends are held in a closed position by a spring e.g. coil spring, and are transferable into an opened position with pressure against the spring force. Cylindrical tubes or cylinders are guided in a telescopic bar (50) and pulled up to maximum extension length to a stop, and the bar is detachably arranged at the clamp, and the length of the bar amounts to approximately 50 centimeters. A foot (60) is detachably arranged at an end (52) of the bar.
