Abstract (en)
[origin: WO2008106780A1] A bucket for handling liquids comprising a collector reservoir, a wringer receptacle having a collector outlet in fluid communication with the collector reservoir and a storage reservoir comprising at least one discharge aperture. The wringer receptacle is positionable between a first position wherein the wringer receptacle blocks the discharge aperture and a second position wherein the wringer receptacle allows fluid communication between the storage reservoir and the wringer receptacle through the discharge aperture. Rinsing of a cleaning medium in the bucket according to the invention is controlled through use of the cleaning medium actuating the wringer receptacle. The storage reservoir may also comprise a valve that can be actuated by movement of the wringer receptacle.
