Abstract (en)
[origin: WO2008120085A2] The invention relates to the use of an amphiphilic polymer for the preparation of a therapeutic composition that is intended to promote angiogenesis at the administration site thereof, comprising a complex between a polymer and a platelet-derived growth factors (PDGF), characterised in that the polymer is amphiphilic. In one embodiment of the invention, the PDGF is selected from the PDGF group and the amphiphilic polymer is selected from the group comprising amphiphilic polymers formed by a hydrophilic polymer backbone functionalised with hydrophobic substituents and hydrophilic groups having general formula (I). The invention also relates to the use of same in accordance with these claims, characterised in that the therapeutic composition takes the form of a gel, cream, solution, spray, paste, patch or bandage.
