Abstract (en)  
[origin: WO2008125266A1] The invention relates to a high-pressure cleaning device with a housing, in which a pump and a drive motor are arranged, wherein liquid pressurised by the pump may be dispensed via a high pressure hose and the high pressure hose may be wound on a hose drum within the housing, mounted to rotate about a rotational axis and arranged to run out of the back of the housing. According to the invention, the high pressure cleaning device may be further developed to give a shorter construction by arranging the rotational axis of the hose drum parallel to the horizontal axis of the housing.
