Abstract (en)

[origin: WO2008122327A1] The invention relates to a device for conveying goods (148) from a stack to an exit, comprising a stack area (145) which is configured to receive a stack containing a plurality of goods, a guide element (152, 130) which extends to an exit, and a transport mechanism (162) which is configured to engage with at least a part of the goods in the stack in order to convey the goods in the direction of the exit in such a manner that edges of the goods abut the guide element.
